

Ingelvac® PRRS MLV

PRRS Vaccine

Description

Ingelvac PRRS MLV is a vaccine that is proven safe in pigs as well as gilts and sows at any stage of production in PRRS positive herds. It provides cross protection against heterologous (including Lelystad virus) and homologous challenge and has shown to significantly reduce reproductive failure and respiratory disease due to PRRS virus.

Features

Safe in pigs, gilts and sows at any stage of production.
Aids in the reduction of both reproductive and respiratory forms of the disease caused by PRRS virus.
Proven cross protection against heterologous (including Lelystad virus) and homologous challenge.
Easy to use, cost effective and field proven against respiratory and reproductive forms of PRRS Virus.

Benefits

Long-lasting immunity.
Whole herd or population based PRRS control program advantages.
Significantly reduces reproductive failure due to PRRS virus.
Reduces PRRS viremia in challenged animals.
Gilt stabilization/acclimatization program advantages.

Advantages

Safe at any stage of production.
Controls both respiratory and reproductive forms of PRRS.

Dosage & Administration

Ingelvac PRRS MLV utilizes the same intramuscular (IM) dose size (2 mL) for pigs, adult breeding-age or pregnant females.

Pigs, gilts and sows: Ingelvac PRRS MLV is recommended for use in healthy susceptible swine in PRRS virus-positive herds according to label direction. Using aseptic technique, administer a single 2 mL dose intramuscularly (IM) to aid in the reduction of disease associated with PRRS. The duration of immunity is throughout the finishing or gestation period, or up to 4 months post-vaccination.

The vaccine can be used at any stage of production. Revaccination of the whole herd can occur every 3-4 months or as directed by your veterinarian.

DO NOT VACCINATE BOARS.

Precautions

For veterinary use only; for use only in swine as directed.

See label insert for complete information.

Uses

Whole herd or population based PRRS control programs.
Replacement gilt immunization and preparation.
Reproductive maintenance vaccination program in sows.

Warning

Do not vaccinate boars.
Anaphylactoid reactions may occur.
Antidote: administer epinephrine.
Vaccinated pigs, sows or gilts are not to be harvested for human consumption before 21 days post-vaccination. Ingelvac PRRS MLV is not recommended for use in PRRS negative (naïve) herds.

Product Information

Name	Code	Size
Ingelvac® PRRS MLV	124-511	20 mL 10 dose
	124-531	100 mL 50 dose

Highlights

- Safe for use at any stage of production.
- Modified live virus vaccine with proven efficacy.
- Demonstrated cross protection against heterologous (including Lelystad virus) and homologous challenge.

Serial No.:
Exp. Date:

Indications: Recommended for the vaccination of healthy, susceptible swine as an aid in the reduction of disease associated with Porcine Reproductive and Respiratory Syndrome virus, reproductive and respiratory forms.

Directions: Rehydrate the vaccine by adding the accompanying liquid diluent to the vaccine vial. Shake well and use immediately. See insert for complete directions.

Dosage: See insert for complete information.

Precautions: Store out of direct sunlight at a temperature between 35-45°F (2-7°C). Use entire contents when first opened. Do not vaccinate

within 21 days before slaughter. Do not vaccinate breeding age boars. Burn containers and all unused contents. Anaphylactoid reactions may occur.

Antidote: Epinephrine.

Preservative: Neomycin.
