## Erysipelothrix Rhusiopathiae Vaccine Live Culture, Frozen Form

### Description

Erysipelothrix Rhusiopathiae Vaccine, Live Culture is a frozen vaccine prepared from a specially selected strain of *Erysipelothrix rhusiopathiae*.

### Features

One dose provides 128 days of immunity.

Easy, oral administration via drinking water.

Onset of immunity in one week.

Safe when pigs consume 50 times recommended dosage.

### Benefits

Protection to market.

Saves Labor.

No needle delivery.

Faster onset of immunity.

Lower cost of administration.

### Advantages

The only one dose oral erysipelas vaccine in the market.

Most economic erysipelas protection to market.

Simple oral vaccination eliminates need for injection.

### Dosage & Administration

Administer 1 dose per pig in the drinking water.

Plan vaccination timing to allow thawing of the contents of the vaccine vial in air at controlled room temperature or in a cold water bath at (60-75°) until liquid.

### Precautions

Store frozen at ultralow temperatures below -50°C or with dry ice packs.

Can be stored at -20°C for not more than 14 days. **Do not refreeze.** Use entire contents when first opened.

Do not vaccinate within 21 days before slaughter. Burn containers and all unused contents.

Anaphylactoid reactions may occur. Administer epinephrine.

### Highlights

- One dose provides 128 days of immunity
- Onset of immunity in one week.
- PQA friendly – no needles
- Less vaccination stress

### Uses

Recommended for the oral administration to healthy, susceptible swine eight weeks of age or older for prevention of disease caused by *Erysipelothrix rhusiopathiae* (erysipelas).

Herds at risk of breaking with erysipelas.

Herds where pork Quality Assurance is a priority.

### Warning

For veterinary use only.

Avoid direct contact: If human exposure occurs, flush area with clean water, administer first aid, and consult physician immediately.
