3FLEX®
Porcine Reproductive & Respiratory Syndrome Modified Live Virus Vaccine, Porcine Circovirus Type 2 Killed Baculovirus Vector Vaccine and Mycoplasma Hyopneumoniae Bacterin

Description
The 3FLEX® combination package contains Porcine Circovirus Type 2 (PCV2), Mycoplasma hyopneumoniae (M hyo) and Porcine Reproductive and Respiratory Syndrome (PRRS) vaccine that is USDA approved to be mixed and administered as a single injection to pigs three weeks of age and older.

Advantages
- For pigs 3 weeks of age and older
- The only 3-way licensed USDA circovirus, mycoplasma and PRRS combination vaccine
- Single 2 mL dose
- Easy to administer
- Contains ImpranFLEX®, an effective, aqueous-based (non-oil) polymer adjuvant
- Long lasting duration of immunity
- Proven lack of interference between antigens to provide optimum efficacy
- Member of FLEX Family™
- Headspace bottle technology allows for easy mixing

Dosage & Administration
Mix the package contents according to label instructions. Using aseptic technique, inject a single 2 mL dose of vaccine intramuscularly. Semi-annual revaccination with Ingelvac MycoFLEX® is recommended for breeding swine.

Precautions/Warnings
Store at 35-45°F (2-7°C). Do not freeze. Use entire contents when first opened. Do not vaccinate within 21 days before slaughter. Do not vaccinate breeding age boars. PRRS vaccine virus may be shed and transmitted to other populations of swine which are in contact with vaccinated swine. The duration of potential vaccine virus transmission may vary. Burn containers and all unused contents. In case of anaphylactic reaction, epinephrine is the symptomatic treatment.

Uses
For vaccination of healthy, susceptible swine 3 weeks of age or older as an aid in the prevention of lymphoid depletion, inflammation and colonization of lymphoid tissue associated with Porcine Circovirus Type 2 (PCV2), as an aid in the reduction of disease caused by Mycoplasma hyopneumoniae, and as an aid in the prevention of respiratory disease associated with Porcine Reproductive and Respiratory Syndrome virus. Indicated for use in PRRS virus positive herds only. The onset of protection against Porcine Circovirus Type 2 is 2 weeks post-vaccination, and the duration of immunity is at least 4 months. The duration of immunity against M. hyopneumoniae is at least 26 weeks. The duration of immunity against PRRS is at least 4 months, which is throughout gestation of sows and gilts, or throughout the finishing period for pigs.

Preservative: Neomycin.
Package contains one bottle of Ingelvac CircoFLEX® 1, one bottle of Ingelvac MycoFLEX® 2, and one bottle of Ingelvac PRRS® MLV 3. The Ingelvac MycoFLEX® 2 is supplied in a headspace bottle (HSB) with extra capacity for the purpose of aseptic mixing.

Highlights
- Combination packaging with headspace bottle technology for easy mixing
- Ability to customize vaccination scheduling
- Single 2 mL dose
- Safe
- Three efficacious vaccines in one injection
